API Reference

Request

Retrieve tracking information for a MAWB ID.

```
GET http://api.glslatina.it/mawb/${mawb-id}
```

This is an example:

```
GET https://api.glslatina.it/mawb/123-123456
```

HTTP Header	Type	Description
`x-api-key`	`string`	**Required**. Provided API key

REST Param	Type	Description
`mawb-id`	`string`	**Required**. ID of a valid MAWB e.g. `123-12345678`

Response

Response is in **JSON** as shown in `resp_by_mawb_id.json` , it contains a `resp_status` key (the response message status) and the possible status codes are `HTTP` compliant as table below :

HTTP status code	resp_status
`200`	ok (request successfully completed)
`400`	bad params (e.g. missing `mawb-id`)
`401`	unauthorized (e.g. missing `x-api-key`)
`404`	not found (e.g. invalid `mawb-id`)
`500`	server error (e.g. internal server/db err)

Request

Retrieve tracking information for a tracking ID (GLS parcel ID).

```
GET http://api.glslatina.it/tracking/${tracking-id}
```

This is an example:

```
GET http://api.glslatina.it/tracking/LT642428350
```

HTTP Header	Type	Description
`x-api-key`	`string`	**Required**. Provided API key

REST Param	Type	Description
`tracking-id`	`string`	**Required**. ID of a valid tracking ID e.g. `LT641122059`

Response

Response is in **JSON** as shown in `resp_by_tracking_id.json` , it contains a `resp_status` key (the response message status) and the possible status codes are `HTTP` compliant as table below :

HTTP status code	resp_status
`200`	ok (request successfully completed)
`400`	bad params (e.g. missing `tracking-id`)
`401`	unauthorized (e.g. missing `x-api-key`)
`404`	not found (e.g. invalid `tracking-id`)
`500`	server error (e.g. internal server/db err)
